

CHANGE NOTICE

Effective Date: AUGUST 2008
Log Number: EU-08-401
Part Description: Peri-Pump Block: 00417.00
Models Affected: AH,C, B, L-1X, L-1X16, E, EST, GL-X

CMA has made an investment in modifying the tooling used in manufacturing the peri-pump blocks, which will improve both the longevity of the peri-pump and ease the servicing of the squeeze tubes.

We have added brass inserts to the block molding that secures the peri-pump faceplate. This change should very well reduce breakage and improve serviceability of the pump assembly.

Also, in the coming months, the appearance of the block will change in color from translucent (currently used) to black (new future material). When the new black molding appears, this will indicate that CMA has incorporated this new and improved material, with assurance of an overall improvement.
