

SERVICE BULLETIN

Date: AUGUST 2009

Log Number: 118

Models Affected: L-1X, L-1X16

Subject: IMPORTANT SAFETY WIRING INSTRUCTIONAL MESSAGE

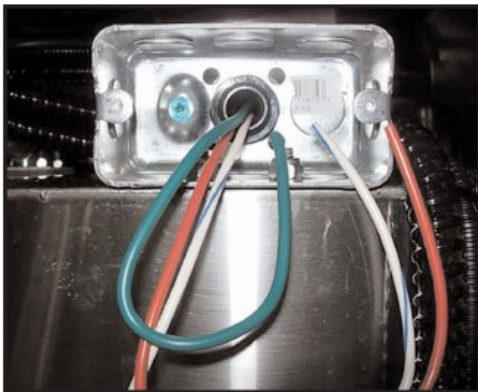

Photo shows the three wire connection point as it appears when junction box cover is removed. For machine to be wired properly, the GREEN ground wire located in the junction box must be secured to green screw grounding lug inside junction box. Caution: install a wire connector on GREEN wire and secure to the junction box provided with green ground lug screw. **Do Not** connect power cord ground or the hard wire ground directly to dishmachine provided GREEN ground wire. Doing so will bypass the proper grounding of the dishmachine.

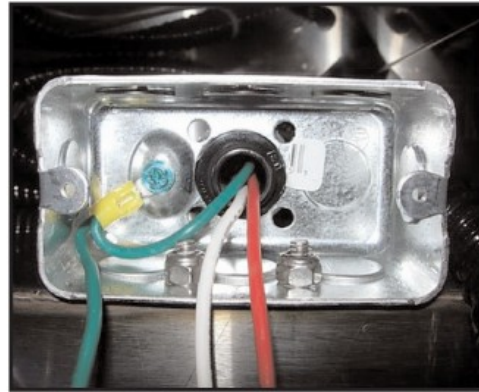

Photo shows proper grounding of the GREEN wire located inside the junction box. Connect power cord ground or hard wire ground (not shown) directly to the green screw ground lug or to the pigtail GREEN wire provided inside the junction box.
