

CHANGE NOTICE

Effective Date: DECEMBER 13, 2011
Log Number: CN-11-434
Subject: STAINLESS STEEL PUMP PN 04208.00 (SET)
Model Affected: CONVEYOR MACHINES

STAINLESS STEEL PUMP

CMA again, may be the first in the Warewashing Industry to provide a “Stainless Steel Pump” on a majority of its dishmachine line, as standard equipment. The CMA “All Stainless Steel Pump” will offer many years of trouble-free service, providing an improved sanitized method for washing dishes. The common materials used in the commercial dishmachine industry, up until now, have been “Gray Iron” and “Plastic” with a limited life expectancy.

CMA continues to listen and respond to what the industry desires, and we are pleased to introduce this new product on most of our product line.

A very important point is that all of the “stainless” parts that make-up the CMA “Stainless Steel Pump” are completely interchangeable with the CMA “Iron” Pump, which has been used for many years.
